Homework #4 BST

- 1. Node Creation: struct node { int data; struct node *left; struct node *right; }
- 2. Main program 참조
 - 1) Menu 구성: (1. Insert, 2. Delete, 3. Search, 4. Print)
 - 2) For each command;
 - Insert: "Enter number to insert: " gets input Num, insert_tree(root, Num)
 - -delete: If (root!=NULL) "Enter number to delete" gets input Num **delete_tree**(root, Num)

else "Tree is empty"

- search: if (root!=NULL) "Enter number to search: " gets input Num

temp=search_tree(root, Num)

if (temp==NULL) "NOT found"

else "%d is found"

else "Tree is empty"

- Print: **Draw_tree(root, 1)**
- quit: exit(0)
- 3. 알고리즘 (강의노트 참조)
- 4. 테스트 절차(예):

Input data: (30 40 50 20 10)

- 1) Insert: 위 데이터를 차례로 입력 시킨후 DRAWTREE로 검사.
- 2) Delete:
 - Leaf 테스트: delete 10, DRAWTREE 로 검사.
 - Single 노드 테스트: delete 20, DRAWTREE 로 검사.
 - 양쪽노드 delete 테스트: delete 30, DRAWTREE 로 검사.
- 3) Search: 특정 데이터를 찾을 것, 못 찾을시에는 "NOT Found" 메시지 출력
- * Print: (lecture note 의 drawtree 함수 이용할수 있음)
